WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W11

G-87-WET

Project Site: A1B2 City/County: Royalston / Worcester State: MA Sampling Point: G-87-WET
Applicant/Owner: National Grid
Investigator(s): C. Cyrus, D. Robertson
Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.69057 Long: -72.24387 Datum: WGS 1984
Soil Map Unit: Bucksport and Wonsqueak mucks, 0 to 2 percent slopes NWI Class: PEM
Are climatic/hydrologic conditions on the site typical for this time of year? No
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline easement
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine emergent (PEM) wetland.

HYDROLOGY

Wetland Hydrology Indicators: Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
X Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Field Observations: Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

Problematic Hydrophytic Vegetation¹ (explain)

Rapid Test for Hydrophytic Vegetation

Morphological Adaptations

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and 3in (7.6cm) or larger in diameter at breast height (DBH).

Sapling - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and less than 3in (7.6cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20ft (1 to 6m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3ft (1m) in height.

Woody vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present? Yes

Remarks: (If observed, list morphological adaptations below).
Indicator 1 (Rapid Test) present due to dominance of FACW or OBL species. Dominance Test is calculated for reference purposes only.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W14

G-47-WET

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/4/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-47-WET
Investigator(s): C Cyrus N Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.68771 Long: -72.23541 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
X Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W16

G-49-UPL

Project Site: A1B2 City/County: Royalston / Worcester State: MA Sampling Point: G-49-UPL
Applicant/Owner: National Grid
Investigator(s): C Cyrus N Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Convex Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.68701 Long: -72.23337 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
X Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
X Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) X Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? Yes
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

Hydrophytic Vegetation Present? <u>No</u>				

Remarks: (If observed, list morphological adaptations below).
No hydrophytic vegetation indicators present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

G-52-WET

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/4/2020
 Applicant/Owner: National Grid State: MA Sampling Point: G-52-WET
 Investigator(s): C Cyrus N Newberry Section, Township, Range: N/A
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 1-2%
 Subregion (LRR or MLRA): LRR R Lat: 42.68333 Long: -72.22224 Datum: WGS 1984
 Soil Map Unit: Bucksport and Wonsqueak mucks, 0 to 2 percent slopes NWI Class: PEM
 Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
 Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
 Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
 Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks: _____

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? <u>Yes</u>	Is This Sample Area Within a Wetland? <u>Yes</u>
Hydric Soil Present? <u>Yes</u>	
Wetland Hydrology Present? _____	

Remarks: All parameters are met. Area is classified as a palustrine emergent (PEM) wetland.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> Water-Stained Leaves (B9)	<input type="checkbox"/> Surface Soil Cracks (B6)
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Aquatic Fauna (B13)	<input type="checkbox"/> Drainage Patterns (B10)
<input checked="" type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Marl Deposits (B15)	<input type="checkbox"/> Moss Trim Lines (B16)
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Dry-Season Water Table (C2)
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Crayfish Burrows (C8)
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Saturation Visible on Aerial (C9)
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C5)	<input checked="" type="checkbox"/> Stunted or Stressed Plants (D1)
<input type="checkbox"/> Iron Deposits (B5)	<input type="checkbox"/> Thin Muck Surface (C7)	<input checked="" type="checkbox"/> Geomorphic Position (D2)
<input type="checkbox"/> Inundation Visible on Aerial (B7)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Shallow Aquitard (D3)
<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)		<input checked="" type="checkbox"/> Microtopographic Relief (D4)
		<input checked="" type="checkbox"/> FAC-Neutral Test (D5)

Secondary Indicators (minimum of two required)

Field Observations:

Surface Water Present? _____ Depth (inches): N/A

Water Table Present? _____ Depth (inches): N/A

Saturation Present? X Depth (inches): Surface

Wetland Hydrology Present? Yes

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
 Localized inundation to an inch. Sphagnum throughout.

Remarks: At least primary or two secondary indicators of wetland hydrology present; parameter is met.

SOIL

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

F14

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/4/2020
Applicant/Owner: National Grid State: MA Sampling Point: F14
Investigator(s): DCR DMH Section, Township, Range:
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR Lat: 42.67845 Long: -72.20799 Datum:
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class:
Are climatic/hydrologic conditions on the site typical for this time of year? no Remarks: Drought conditions present
Are Normal Circumstances present? no If needed, explain any answers in Remarks: Drought conditions present
Are Vegetation yes, Soil no, or Hydrology no significantly disturbed? Remarks: Maintained ROW
Are Vegetation no, Soil no, or Hydrology no naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? yes
Hydric Soil Present? yes
Wetland Hydrology Present? yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) X Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? yes

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/3/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-42-UPL
Investigator(s): C Cyrus, N Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Bench Local relief (concave, convex, none): Convex Slope (%): 1-2%
Subregion (LRR or MLRA): LRR R Lat: 42.67227 Long: -72.18672 Datum: WGS 1984
Soil Map Unit: Tunbridge-Lyman-Berkshire association, 3 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W36

G-36-WET

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/1/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-36-WET
Investigator(s): C Cyrus N Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.66617 Long: -72.16689 Datum: WGS 1984
Soil Map Unit: Skerry fine sandy loam, 3 to 8 percent slopes NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? Yes Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation Yes, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
X Saturation (A3)
Water Marks (B1)
Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Water-Stained Leaves (B9)
Aquatic Fauna (B13)
Marl Deposits (B15)
Hydrogen Sulfide Odor (C1)
Oxidized Rhizospheres on Living Roots (C3)
Presence of Reduced Iron (C4)
Recent Iron Reduction in Tilled Soils (C5)
Thin Muck Surface (C7)
Other (Explain in Remarks)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Sphagnum present throughout wetland. Access road alters hydro in the middle of the wetland.
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W38

200903WFF12 upland

Project Site: A1B2 City/County: Royalston / Worcester Samp. Date: 9/3/2020
Applicant/Owner: National Grid State: MA Sampling Point: 200903WFF12 upland
Investigator(s): DCR DMH Section, Township, Range:
Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): Lat: 42.66293 Long: -72.15854 Datum:
Soil Map Unit: Tunbridge-Lyman-Berkshire association, 3 to 15 percent slopes, extremely stony NWI Class:
Are climatic/hydrologic conditions on the site typical for this time of year? no Remarks: Drought conditions present
Are Normal Circumstances present? no If needed, explain any answers in Remarks: Drought conditions present
Are Vegetation yes, Soil no, or Hydrology no significantly disturbed? Remarks: Maintained ROW
Are Vegetation no, Soil no, or Hydrology no naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? no
Hydric Soil Present? no
Wetland Hydrology Present? no
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) X Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) Microtopographic Relief (D4)
FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? no
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

SOIL

Table with 9 columns: Depth (in), Matrix, Color (moist), %, Redox Features, Type, Loc, Texture, Remarks. Rows show data for depths 0-2, 2-4, 4-18, and 18-20 inches.

1 Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains. 2 Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:
Histosol (A1) Polyvalue Below Surface (S8) (LRR R, MLRA 149B) 2 cm Muck (A10) (LRR K, L, MLRA 149B)
Histic Epipedon (A2) Thin Dark Surface (S9) (LRR R, MLRA 149B) Coast Prairie Redox (A16) (LRR K, L, R)
Black Histic (A3) Loamy Mucky Mineral (F1) (LRR K, L) 5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
Hydrogen Sulfide (A4) Loamy Gleyed Matrix (F2) Dark Surface (S7) (LRR K, L, M)
Stratified Layers (A5) Depleted Matrix (F3) Polyvalue Below Surface (S8) (LRR K, L)
Depleted Below Dark Surface (A11) Redox Dark Surface (F6) Thin Dark Surface (S9) (LRR K, L)
Thick Dark Surface (A12) Depleted Dark Surface (F7) Iron-Manganese Masses (F12) (LRR K, L, R)
Sandy Mucky Mineral (S1) Redox Depressions (F8) Piedmont Floodplain Soils (F19) (MLRA 149B)
Sandy Gleyed Matrix (S4) Red Parent Material (F21) Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
Sandy Redox (S5) Very Shallow Dark Surface (TF12)
Stripped Matrix (S6) Other (Explain in Remarks)
Dark Surface (S7) (LRR R, MLRA 149B)
3 Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):
Type:
Depth (inches):
Hydric Soil Present? no
Remarks: No hydric soil indicators present and soil does not meet NTCHS definition of hydric soil; parameter is not met.

VEGETATION - Use scientific names of plants.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W57

E5-wetland

Project Site: A1B2 City/County: Royalston / Worcester State: MA Sampling Point: E5-wetland
Applicant/Owner: National Grid
Investigator(s): J. Peterson & M. Murphy
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR Lat: 42.66002 Long: -72.16020 Datum: GCS WGS 1984
Soil Map Unit: Tunbridge-Lyman-Berkshire association NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? no Remarks: Lower than usual rainfall.
Are Normal Circumstances present? yes If needed, explain any answers in Remarks:
Are Vegetation yes, Soil yes, or Hydrology yes significantly disturbed? Remarks: Electrical right-of-way
Are Vegetation no, Soil no, or Hydrology no naturally problematic? Remarks: Electrical right-of-way

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? yes
Hydric Soil Present? yes
Wetland Hydrology Present? yes
Is This Sample Area Within a Wetland? yes
Remarks:

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
X Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) X Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) X Microtopographic Relief (D4)
FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? X Depth (inches): 10
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks:

SOIL

Table with 9 columns: Depth (in), Matrix, Color (moist), %, Redox Features, Type, Loc, Texture, Remarks. Rows show soil profiles at depths 0-1, 1-3, 3-6, and 6-10 inches.

1 Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains. 2 Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:
Histosol (A1) Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
Histic Epipedon (A2)
Black Histic (A3) Thin Dark Surface (S9) (LRR R, MLRA 149B)
Hydrogen Sulfide (A4) Loamy Mucky Mineral (F1) (LRR K, L)
Stratified Layers (A5) Loamy Gleyed Matrix (F2)
Depleted Below Dark Surface (A11) Depleted Matrix (F3)
Thick Dark Surface (A12) X Redox Dark Surface (F6)
Sandy Mucky Mineral (S1) Depleted Dark Surface (F7)
Sandy Gleyed Matrix (S4) Redox Depressions (F8)
Sandy Redox (S5)
Stripped Matrix (S6)
Dark Surface (S7) (LRR R, MLRA 149B)
Indicators for Problematic Hydric Soils:
2 cm Muck (A10) (LRR K, L, MLRA 149B)
Coast Prairie Redox (A16) (LRR K, L, R)
5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
Dark Surface (S7) (LRR K, L, M)
Polyvalue Below Surface (S8) (LRR K, L)
Thin Dark Surface (S9) (LRR K, L)
Iron-Manganese Masses (F12) (LRR K, L, R)
Piedmont Floodplain Soils (F19) (MLRA 149B)
Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
Red Parent Material (F21)
Very Shallow Dark Surface (TF12)
Other (Explain in Remarks)

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W62

E9 - wetland

Project Site: A1B2 City/County: Royalston / Worcester State: MA Sampling Point: E9 - wetland
Applicant/Owner: National Grid
Investigator(s): J. Peterson & M. Murphy
Landform: Depression Local relief: Concave Slope (%):
Subregion: LRR Lat: 42.65061 Long: -72.17400 Datum: GCS WGS 1984
Soil Map Unit: Berkshire-Marlow association NWI Class: PSS
Remarks: Lower than usual rainfall.

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? No
Remarks:

HYDROLOGY

Wetland Hydrology Indicators: Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)

Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks:

SOIL

Table with 8 columns: Depth (in), Matrix, Color (moist), %, Redox Features, Type, Loc, Texture, Remarks. Rows show data for depths 0-1, 1-2, and 2-4 inches.

1Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains. 2Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:
Histosol (A1) Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
Histic Epipedon (A2) MLRA 149B)
Black Histic (A3) Thin Dark Surface (S9) (LRR R, MLRA 149B)
Hydrogen Sulfide (A4) Loamy Mucky Mineral (F1) (LRR K, L)
Stratified Layers (A5) Loamy Gleyed Matrix (F2)
Depleted Below Dark Surface (A11) Depleted Matrix (F3)
Thick Dark Surface (A12) Redox Dark Surface (F6)
Sandy Mucky Mineral (S1) Depleted Dark Surface (F7)
Sandy Gleyed Matrix (S4) Redox Depressions (F8)
Sandy Redox (S5)
Stripped Matrix (S6)
Dark Surface (S7) (LRR R, MLRA 149B)
Indicators for Problematic Hydric Soils:
2 cm Muck (A10) (LRR K, L, MLRA 149B)
Coast Prairie Redox (A16) (LRR K, L, R)
5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
Dark Surface (S7) (LRR K, L, M)
Polyvalue Below Surface (S8) (LRR K, L)
Thin Dark Surface (S9) (LRR K, L)
Iron-Manganese Masses (F12) (LRR K, L, R)
Piedmont Floodplain Soils (F19) (MLRA 149B)
Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
Red Parent Material (F21)
X Very Shallow Dark Surface (TF12)
Other (Explain in Remarks)

Restrictive Layer (if observed):
Type: Rock
Depth (inches): 4
Hydric Soil Present? Yes

Remarks:

VEGETATION - Use scientific names of plants.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland AT-W1

E15 wet plot

Project Site: A1B2 City/County: Athol / Worcester State: MA Samp. Date: 8/24/2020
Applicant/Owner: National Grid State: MA Sampling Point: E15 wet plot
Investigator(s): J. Peterson and E. Martin Section, Township, Range: Royalston
Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Concave Slope (%): 8-12%

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks:

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
X Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)

Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): 6
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks:

SOIL

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)
Table with columns: Depth (in), Matrix, Redox Features, Type, Loc, Texture, Remarks

1 Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains. 2 Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:
Histosol (A1) Polyvalue Below Surface (S8) (LRR R, MLRA 149B)
Histic Epipedon (A2) MLRA 149B)
Black Histic (A3) Thin Dark Surface (S9) (LRR R, MLRA 149B)
Hydrogen Sulfide (A4) Loamy Mucky Mineral (F1) (LRR K, L)
Stratified Layers (A5) Loamy Gleyed Matrix (F2)
Depleted Below Dark Surface (A11) X Depleted Matrix (F3)
Thick Dark Surface (A12) Redox Dark Surface (F6)
Sandy Mucky Mineral (S1) Depleted Dark Surface (F7)
Sandy Gleyed Matrix (S4) Redox Depressions (F8)
Sandy Redox (S5)
Stripped Matrix (S6)
Dark Surface (S7) (LRR R, MLRA 149B)
Indicators for Problematic Hydric Soils3:
2 cm Muck (A10) (LRR K, L, MLRA 149B)
Coast Prairie Redox (A16) (LRR K, L, R)
5 cm Mucky Peat or Peat (S3) (LRR K, L, R)
Dark Surface (S7) (LRR K, L, M)
Polyvalue Below Surface (S8) (LRR K, L)
Thin Dark Surface (S9) (LRR K, L)
Iron-Manganese Masses (F12) (LRR K, L, R)
Piedmont Floodplain Soils (F19) (MLRA 149B)
Mesic Spodic (TA6) (MLRA 144A, 145, 149B)
Red Parent Material (F21)
Very Shallow Dark Surface (TF12)

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland RO-W53

G-34-WET

Project Site: A1B2 City/County: Royalston / Worcester State: MA Sampling Point: G-34-WET
Applicant/Owner: National Grid
Investigator(s): C. Cyrus, N. Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.64832 Long: -72.11986 Datum: WGS 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PEM
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) X Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) X Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) X Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Sphagnum present throughout
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

				Hydrophytic Vegetation Present? No

Remarks: (If observed, list morphological adaptations below).
No hydrophytic vegetation indicators present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

G-95-WET

Project Site: A1B2 City/County: Athol / Worcester Samp. Date: 9/25/2020
 Applicant/Owner: National Grid State: MA Sampling Point: G-95-WET
 Investigator(s): C. Cyrus, J. Petersen Section, Township, Range: N/A
 Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Concave Slope (%): 3-5%WGS
 Subregion (LRR or MLRA): LRR R Lat: 42.60920 Long: -72.20758 Datum: 1984
 Soil Map Unit: Charlton-Paxton association, 15 to 45 percent slopes, extremely stony NWI Class: PSS
 Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
 Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
 Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
 Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	<u>Yes</u>	Is This Sample Area Within a Wetland?	<u>Yes</u>
Hydric Soil Present?	<u>Yes</u>		
Wetland Hydrology Present?	<u>Yes</u>		
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland AT-W23

G-97-UPL

Project Site: A1B2 City/County: Athol / Worcester Samp. Date: 9/25/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-97-UPL
Investigator(s): C. Cyrus, J. Petersen Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Convex Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.60110 Long: -72.21242 Datum: WGS 1984
Soil Map Unit: Hinckley loamy sand, 25 to 35 percent slopes NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
Saturation (A3)
Water Marks (B1)
X Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Water-Stained Leaves (B9)
Aquatic Fauna (B13)
Marl Deposits (B15)
Hydrogen Sulfide Odor (C1)
Oxidized Rhizospheres on Living Roots (C3)
Presence of Reduced Iron (C4)
Recent Iron Reduction in Tilled Soils (C5)
Thin Muck Surface (C7)
Other (Explain in Remarks)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? No
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W1

G-32-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/31/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-32-WET
Investigator(s): C. Cyrus, N. Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.64416 Long: -72.11524 Datum: WGS 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
X Saturation (A3)
Water Marks (B1)
Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Water-Stained Leaves (B9)
Aquatic Fauna (B13)
Marl Deposits (B15)
Hydrogen Sulfide Odor (C1)
Oxidized Rhizospheres on Living Roots (C3)
Presence of Reduced Iron (C4)
Recent Iron Reduction in Tilled Soils (C5)
Thin Muck Surface (C7)
Other (Explain in Remarks)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
X Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Sphagnum present throughout
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

SOIL

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C6)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? No
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

SOIL

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)
Depth Matrix Redox Features

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

G-28-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/31/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-28-WET
Investigator(s): C. Cyrus, N. Newberry Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Convex Slope (%): 1-2%
Subregion (LRR or MLRA): LRR R Lat: 42.64105 Long: -72.11374 Datum: WGS 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
X Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Did not apply geomorphic position as it appears to be a historically dug out area. Sphagnum present throughout wetland.
Remarks: At least one primary and two secondary indicators of wetland hydrology; parameter is met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W4

200901WFF5

Project Site: A1B2 City/County: Winchendon / Worcester State: MA Sampling Point: 200901WFF5
Applicant/Owner: National Grid
Investigator(s): DCR DMH Section, Township, Range:
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR Lat: 42.63865 Long: -72.11257 Datum:
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class:
Are climatic/hydrologic conditions on the site typical for this time of year? - Remarks: Drought conditions present
Are Normal Circumstances present? - If needed, explain any answers in Remarks: Drought conditions present
Are Vegetation, Soil, or Hydrology significantly disturbed? Remarks: Maintained ROW
Are Vegetation, Soil, or Hydrology naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) X Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: Other

Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
X Saturation (A3)
Water Marks (B1)
Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Water-Stained Leaves (B9)
Aquatic Fauna (B13)
Marl Deposits (B15)
Hydrogen Sulfide Odor (C1)
Oxidized Rhizospheres on Living Roots (C3)
Presence of Reduced Iron (C4)
Recent Iron Reduction in Tilled Soils (C5)
Thin Muck Surface (C7)
Other (Explain in Remarks)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): 18
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks:

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W9

F-1-Wetland

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/31/2020
Applicant/Owner: National Grid State: MA Sampling Point: F-1-Wetland
Investigator(s): C. Robertson, D. Hunter Section, Township, Range:
Landform (hillslope, terrace, etc.): Bench Local relief (concave, convex, none): Concave Slope (%): 1-2%

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) X Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) X Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

C-38-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 11/1/2020
Applicant/Owner: National Grid State: MA Sampling Point: C-38-WET
Investigator(s): C. Cyrus Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 25-30%
Subregion (LRR or MLRA): LRR R Lat: 42.62811 Long: -72.07072 Datum: WGS 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? Yes
Are Normal Circumstances present? Yes If needed, explain any answers in Remarks:
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Transmission ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
X Saturation (A3)
Water Marks (B1)
Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

C-36-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 11/1/2020
Applicant/Owner: National Grid State: MA Sampling Point: C-36-WET
Investigator(s): C. Cyrus Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 3-5%WGS
Subregion (LRR or MLRA): LRR R Lat: 42.62790 Long: -72.07017 Datum: 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PFO
Are climatic/hydrologic conditions on the site typical for this time of year? Yes
Are Normal Circumstances present? Yes If needed, explain any answers in Remarks:
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Transmission ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? No
Remarks: All parameters are met. Area is classified as a palustrine forested (PFO) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
X Surface Water (A1) Water-Stained Leaves (B9)
X High Water Table (A2) Aquatic Fauna (B13)
X Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? X Depth (inches): 1
Water Table Present? X Depth (inches): Surface
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

 Indicator 1 (Rapid Test) is present with all dominant species across all strata FACW or wetter. Parameter is met. Dominance Test is calculated for reference purposes only.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W14

G-23-UPL

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/28/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-23-UPL
Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.63288 Long: -72.06978 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Rained yesterday
Remarks:
No primary or secondary indicators of wetland hydrology present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W15

G-21-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/28/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-21-WET
Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.63294 Long: -72.06521 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1) Water-Stained Leaves (B9)
High Water Table (A2) Aquatic Fauna (B13)
Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) X Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Rained previous day. Wetland appears entirely surface water run-off driven
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

G-19-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/28/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-19-WET
Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 3-5%
Subregion (LRR or MLRA): LRR R Lat: 42.63242 Long: -72.06012 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil Yes, or Hydrology No significantly disturbed? Remarks: Powerline ROW; impounded lake
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
X Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 1-2%
Subregion (LRR or MLRA): LRR R Lat: 42.63024 Long: -72.05350 Datum: WGS 1984
Soil Map Unit: Colton gravelly loamy sand, 3 to 8 percent slopes NWI Class: PSS
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
X Surface Water (A1) Water-Stained Leaves (B9)
X High Water Table (A2) Aquatic Fauna (B13)
X Saturation (A3) Marl Deposits (B15)
Water Marks (B1) Hydrogen Sulfide Odor (C1)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3)
Drift Deposits (B3) Presence of Reduced Iron (C4)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5)
Iron Deposits (B5) Thin Muck Surface (C7)
Inundation Visible on Aerial (B7) Other (Explain in Remarks)
Sparsely Vegetated Concave Surface (B8)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
X Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
X Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? X Depth (inches): 1
Water Table Present? X Depth (inches): Surface
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Rained previous day, standing water was observed to be present prior to rain
Remarks: At least one primary or two secondary indicators of wetland hydrology; parameter is met.

Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Concave Slope (%): 8-12%
Subregion (LRR or MLRA): LRR R Lat: 42.62297 Long: -72.03899 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W30

G-12-UPL

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/27/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-12-UPL
Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Hillside Local relief (concave, convex, none): Convex Slope (%): 8-12%
Subregion (LRR or MLRA): LRR R Lat: 42.62003 Long: -72.03312 Datum: WGS 1984
Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: PFO
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

Remarks: (If observed, list morphological adaptations below).
 Data point located in a recently harvested farm field. No hydrophytic vegetation indicators present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

BSC Wetland WIN-W31

G-10-WET

Project Site: A1B2 City/County: Winchendon / Worcester Samp. Date: 8/26/2020
Applicant/Owner: National Grid State: MA Sampling Point: G-10-WET
Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 1-2%
Subregion (LRR or MLRA): LRR R Lat: 42.61904 Long: -72.03163 Datum: WGS 1984
Soil Map Unit: Bucksport and Wonsqueak mucks, 0 to 2 percent slopes NWI Class: PEM
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes
Hydric Soil Present? Yes
Wetland Hydrology Present? Yes
Is This Sample Area Within a Wetland? Yes
Remarks: All parameters are met. Area is classified as a palustrine scrub-shrub (PSS) wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Surface Water (A1)
High Water Table (A2)
X Saturation (A3)
Water Marks (B1)
Sediment Deposits (B2)
Drift Deposits (B3)
Algal Mat or Crust (B4)
Iron Deposits (B5)
Inundation Visible on Aerial (B7)
Sparsely Vegetated Concave Surface (B8)
Water-Stained Leaves (B9)
Aquatic Fauna (B13)
Marl Deposits (B15)
Hydrogen Sulfide Odor (C1)
Oxidized Rhizospheres on Living Roots (C3)
Presence of Reduced Iron (C4)
Recent Iron Reduction in Tilled Soils (C6)
Thin Muck Surface (C7)
Other (Explain in Remarks)
Secondary Indicators (minimum of two required)
Surface Soil Cracks (B6)
Drainage Patterns (B10)
Moss Trim Lines (B16)
Dry-Season Water Table (C2)
Crayfish Burrows (C8)
Saturation Visible on Aerial (C9)
Stunted or Stressed Plants (D1)
Geomorphic Position (D2)
Shallow Aquitard (D3)
Microtopographic Relief (D4)
X FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A
Water Table Present? Depth (inches): N/A
Saturation Present? X Depth (inches): Surface
Wetland Hydrology Present? Yes
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
One edge of wetland boundary formed by stone wall; geomorphic position not applied.
Remarks: At least one primary or two secondary indicators of wetland hydrology present; parameter is met.

SOIL

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Landform (hillslope, terrace, etc.): Ridge Local relief (concave, convex, none): Flat Slope (%): 1-2%
Subregion (LRR or MLRA): LRR R Lat: 42.61776 Long: -72.02893 Datum: WGS 1984
Soil Map Unit: Pillsbury-Peacham association, 0 to 8 percent slopes, extremely stony NWI Class: Upland
Are climatic/hydrologic conditions on the site typical for this time of year? No Remarks: Drought conditions
Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? No
Hydric Soil Present? No
Wetland Hydrology Present? No
Is This Sample Area Within a Wetland? No
Remarks: One or more parameters lacking. Area is not a jurisdictional wetland.

HYDROLOGY

Wetland Hydrology Indicators:
Primary Indicators (minimum of one is required; check all that apply)
Secondary Indicators (minimum of two required)
Surface Water (A1) Water-Stained Leaves (B9) Surface Soil Cracks (B6)
High Water Table (A2) Aquatic Fauna (B13) Drainage Patterns (B10)
Saturation (A3) Marl Deposits (B15) Moss Trim Lines (B16)
Water Marks (B1) Hydrogen Sulfide Odor (C1) Dry-Season Water Table (C2)
Sediment Deposits (B2) Oxidized Rhizospheres on Living Roots (C3) Crayfish Burrows (C8)
Drift Deposits (B3) Presence of Reduced Iron (C4) Saturation Visible on Aerial (C9)
Algal Mat or Crust (B4) Recent Iron Reduction in Tilled Soils (C5) Stunted or Stressed Plants (D1)
Iron Deposits (B5) Thin Muck Surface (C7) Geomorphic Position (D2)
Inundation Visible on Aerial (B7) Other (Explain in Remarks) Shallow Aquitard (D3)
Sparsely Vegetated Concave Surface (B8) FAC-Neutral Test (D5)
Field Observations:
Surface Water Present? Depth (inches): N/A Wetland Hydrology Present? No
Water Table Present? Depth (inches): N/A
Saturation Present? Depth (inches): N/A
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:
Remarks: No primary or secondary indicators of wetland hydrology present; parameter is not met.

 Problematic Hydrophytic Vegetation¹ (explain)

 Rapid Test for Hydrophytic Vegetation

 Morphological Adaptations

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and 3in (7.6cm) or larger in diameter at breast height (DBH).

Sapling - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and less than 3in (7.6cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20ft (1 to 6m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3ft (1m) in height.

Woody vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present? No

Remarks: (If observed, list morphological adaptations below).
 No hydrophytic vegetation indicators present; parameter is not met.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

G-3-UPL

Project Site: A1B2 City/County: Gardner / Worcester Samp. Date: 8/24/2020
 Applicant/Owner: National Grid State: MA Sampling Point: G-3-UPL
 Investigator(s): C. Cyrus, D. Robertson Section, Township, Range: N/A
 Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 1-2%
 Subregion (LRR or MLRA): LRR R Lat: 42.60540 Long: -72.00707 Datum: WGS 1984
 Soil Map Unit: Becket-Skerry association, 0 to 15 percent slopes, extremely stony NWI Class: Upland
 Are climatic/hydrologic conditions on the site typical for this time of year? no Remarks: Drought conditions
 Are Normal Circumstances present? No If needed, explain any answers in Remarks: Drought conditions
 Are Vegetation Yes, Soil No, or Hydrology No significantly disturbed? Remarks: Powerline ROW
 Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks:

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? <u>Yes</u>	Is This Sample Area Within a Wetland? <u>No</u>
Hydric Soil Present? <u>No</u>	
Wetland Hydrology Present? <u>No</u>	
Remarks: <u>One or more parameters lacking. Area is not a jurisdictional wetland.</u>

Dominance Test is > 50%

Prevalence Index is <= 3.0

Problematic Hydrophytic Vegetation¹ (explain)

Rapid Test for Hydrophytic Vegetation

Morphological Adaptations

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and 3in (7.6cm) or larger in diameter at breast height (DBH).

Sapling - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and less than 3in (7.6cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20ft (1 to 6m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3ft (1m) in height.

Woody vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present? Yes

Remarks: (If observed, list morphological adaptations below).
 Indicator 2 (Dominance Test) present with >50% of dominant species across all vegetation strata FAC or wetter.

Hydrophytic Vegetation Indicators:

Dominance Test is > 50%

Prevalence Index is <= 3.0

Problematic Hydrophytic Vegetation¹ (explain)

Rapid Test for Hydrophytic Vegetation

Morphological Adaptations

¹Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and 3in (7.6cm) or larger in diameter at breast height (DBH).

Sapling - Woody plants, excluding woody vines, approximately 20ft (6m) or more in height and less than 3in (7.6cm) DBH.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20ft (1 to 6m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size. Includes woody plants, except woody vines, less than approximately 3ft (1m) in height.

Woody vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present? Yes

Remarks: (If observed, list morphological adaptations below).
 Indicator 2 (Dominance Test) present with >50% of dominant species across all vegetation strata FAC or wetter.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Remarks: (If observed, list morphological adaptations below).
 Indicator 2 (Dominance Test) present with >50% of dominant species across all vegetation strata FAC or wetter.

WETLAND DETERMINATION DATA FORM - Northcentral and Northeast Region

Wetland C30 (upland plot)

Project Site: A1/B2 Line City/County: Gardner / Worcester Smp. Date: 6/18/2020
 Applicant/Owner: National Grid State: MA Sampling Point: Wetland C30 (upland plot)
 Investigator(s): Tim Sullivan and Nicole Martin Section, Township, Range: Gardner
 Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): Flat Slope (%): 1-2%
 Subregion (LRR or MLRA): LRR Lat: 42.59983 Long: -71.98530 Datum: NAD 83
 Soil Map Unit: Searsport loamy sand, 0 to 3 percent slopes NWI Class: _____
 Are climatic/hydrologic conditions on the site typical for this time of year? Yes Remarks: _____
 Are Normal Circumstances present? Yes If needed, explain any answers in Remarks: _____
 Are Vegetation No, Soil No, or Hydrology No significantly disturbed? Remarks: _____
 Are Vegetation No, Soil No, or Hydrology No naturally problematic? Remarks: _____

SUMMARY OF FINDINGS - Attach site map showing sample point locations, transects, important features, etc.

Hydrophytic Vegetation Present? <u>Yes</u>	Is This Sample Area Within a Wetland? <u>No</u>
Hydric Soil Present? <u>No</u>	
Wetland Hydrology Present? <u>No</u>	
Remarks: <u>One or more parameters lacking. Area is not a jurisdictional wetland.</u>	

HYDROLOGY

Wetland Hydrology Indicators: Primary Indicators (minimum of one is required; check all that apply) <input type="checkbox"/> Surface Water (A1) <input type="checkbox"/> Water-Stained Leaves (B9) <input type="checkbox"/> High Water Table (A2) <input type="checkbox"/> Aquatic Fauna (B13) <input type="checkbox"/> Saturation (A3) <input type="checkbox"/> Marl Deposits (B15) <input type="checkbox"/> Water Marks (B1) <input type="checkbox"/> Hydrogen Sulfide Odor (C1) <input type="checkbox"/> Sediment Deposits (B2) <input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3) <input type="checkbox"/> Drift Deposits (B3) <input type="checkbox"/> Presence of Reduced Iron (C4) <input type="checkbox"/> Algal Mat or Crust (B4) <input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C5) <input type="checkbox"/> Iron Deposits (B5) <input type="checkbox"/> Thin Muck Surface (C7) <input type="checkbox"/> Inundation Visible on Aerial (B7) <input type="checkbox"/> Other (Explain in Remarks) <input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	Secondary Indicators (minimum of two required) <input type="checkbox"/> Surface Soil Cracks (B6) <input type="checkbox"/> Drainage Patterns (B10) <input type="checkbox"/> Moss Trim Lines (B16) <input type="checkbox"/> Dry-Season Water Table (C2) <input type="checkbox"/> Crayfish Burrows (C8) <input type="checkbox"/> Saturation Visible on Aerial (C9) <input type="checkbox"/> Stunted or Stressed Plants (D1) <input type="checkbox"/> Geomorphic Position (D2) <input type="checkbox"/> Shallow Aquitard (D3) <input type="checkbox"/> Microtopographic Relief (D4) <input type="checkbox"/> FAC-Neutral Test (D5)
Field Observations: Surface Water Present? _____ Depth (inches): <u>N/A</u> Water Table Present? _____ Depth (inches): <u>N/A</u> Saturation Present? _____ Depth (inches): <u>N/A</u>	Wetland Hydrology Present? <u>No</u>
Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:	
Remarks: <u>No primary or secondary indicators of wetland hydrology present; parameter is not met.</u>	

SOIL

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)
